

# Federal Communications Commission Broadband Availability Challenge Process

December 2, 2022

Communications Division

California Public  
Utilities Commission

# Disclaimer

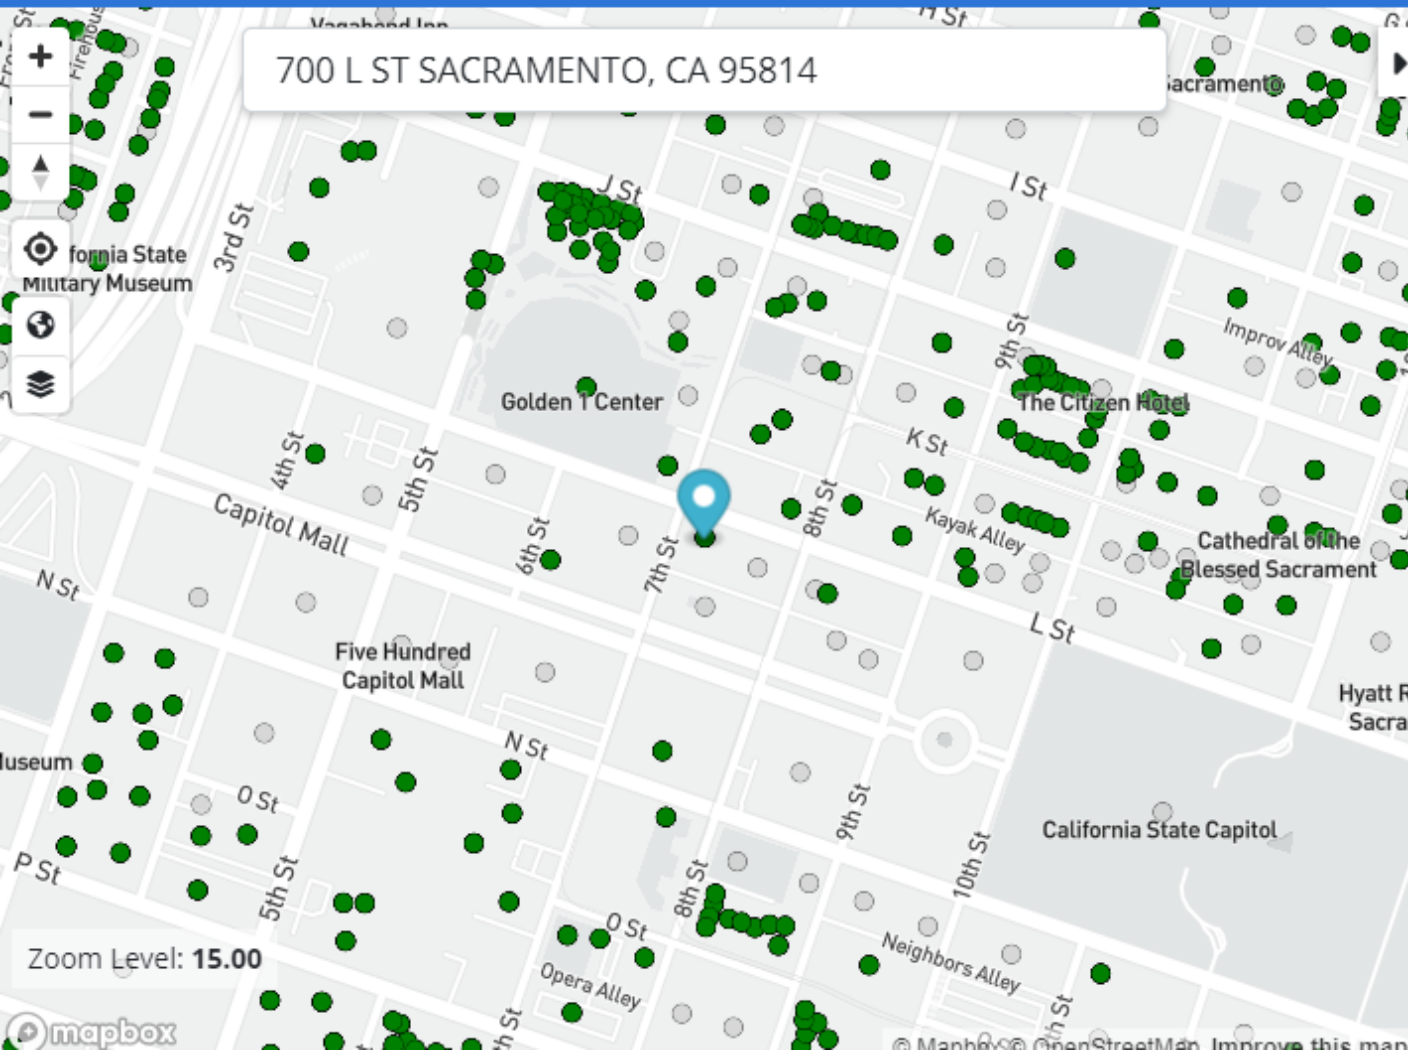

- These slides are an **informal read** on the FCC's availability challenge process and should not be read as a substitute, a replacement, or in lieu of the FCC's rules, processes, and policies.
- Due to the extremely short timeline set by the FCC, and the need expressed by both the FCC and the NTIA to get the word out about the map and the challenge process, the goal of today's webinar is to do just that: get the word out.
- We strongly encourage those planning to engage with the FCC's broadband data to go directly to the large set of FCC resources they have provided to get answers to questions, including videos and FAQs.

# Overview

- FCC National Broadband Map
- FCC Availability Challenge Process
  - Validating locations vs. validating services offered by providers
- How to challenge locations on the map
  - Individual, bulk, and crowdsource challenges
- Call to Action

# The FCC National Broadband Map

- The map is based on data submitted by Internet Service Providers as of June 30, 2022.
- The Broadband Serviceable Location Fabric (Fabric) is a common dataset of all locations in the United States where fixed broadband internet access service is or can be installed.
- The map shows location level information on broadband availability throughout the country.
- To improve the accuracy of the national broadband map, the FCC began accepting challenges to Fabric information from providers, states, and local and Tribal governments in September.

## Selected Location

**700 L ST**  
**SACRAMENTO, CA 95814**

[Location Challenge](#)

Status: **Served** | Business | Unit Count: 1

## Broadband

**Type** Residential  
**Technology** Any Technology  
**Speed** 25/3 Mbps or greater  
**Data As Of** Jun 30, 2022 (Last Updated: 11/17/22)

[Residential](#) | [Business](#)

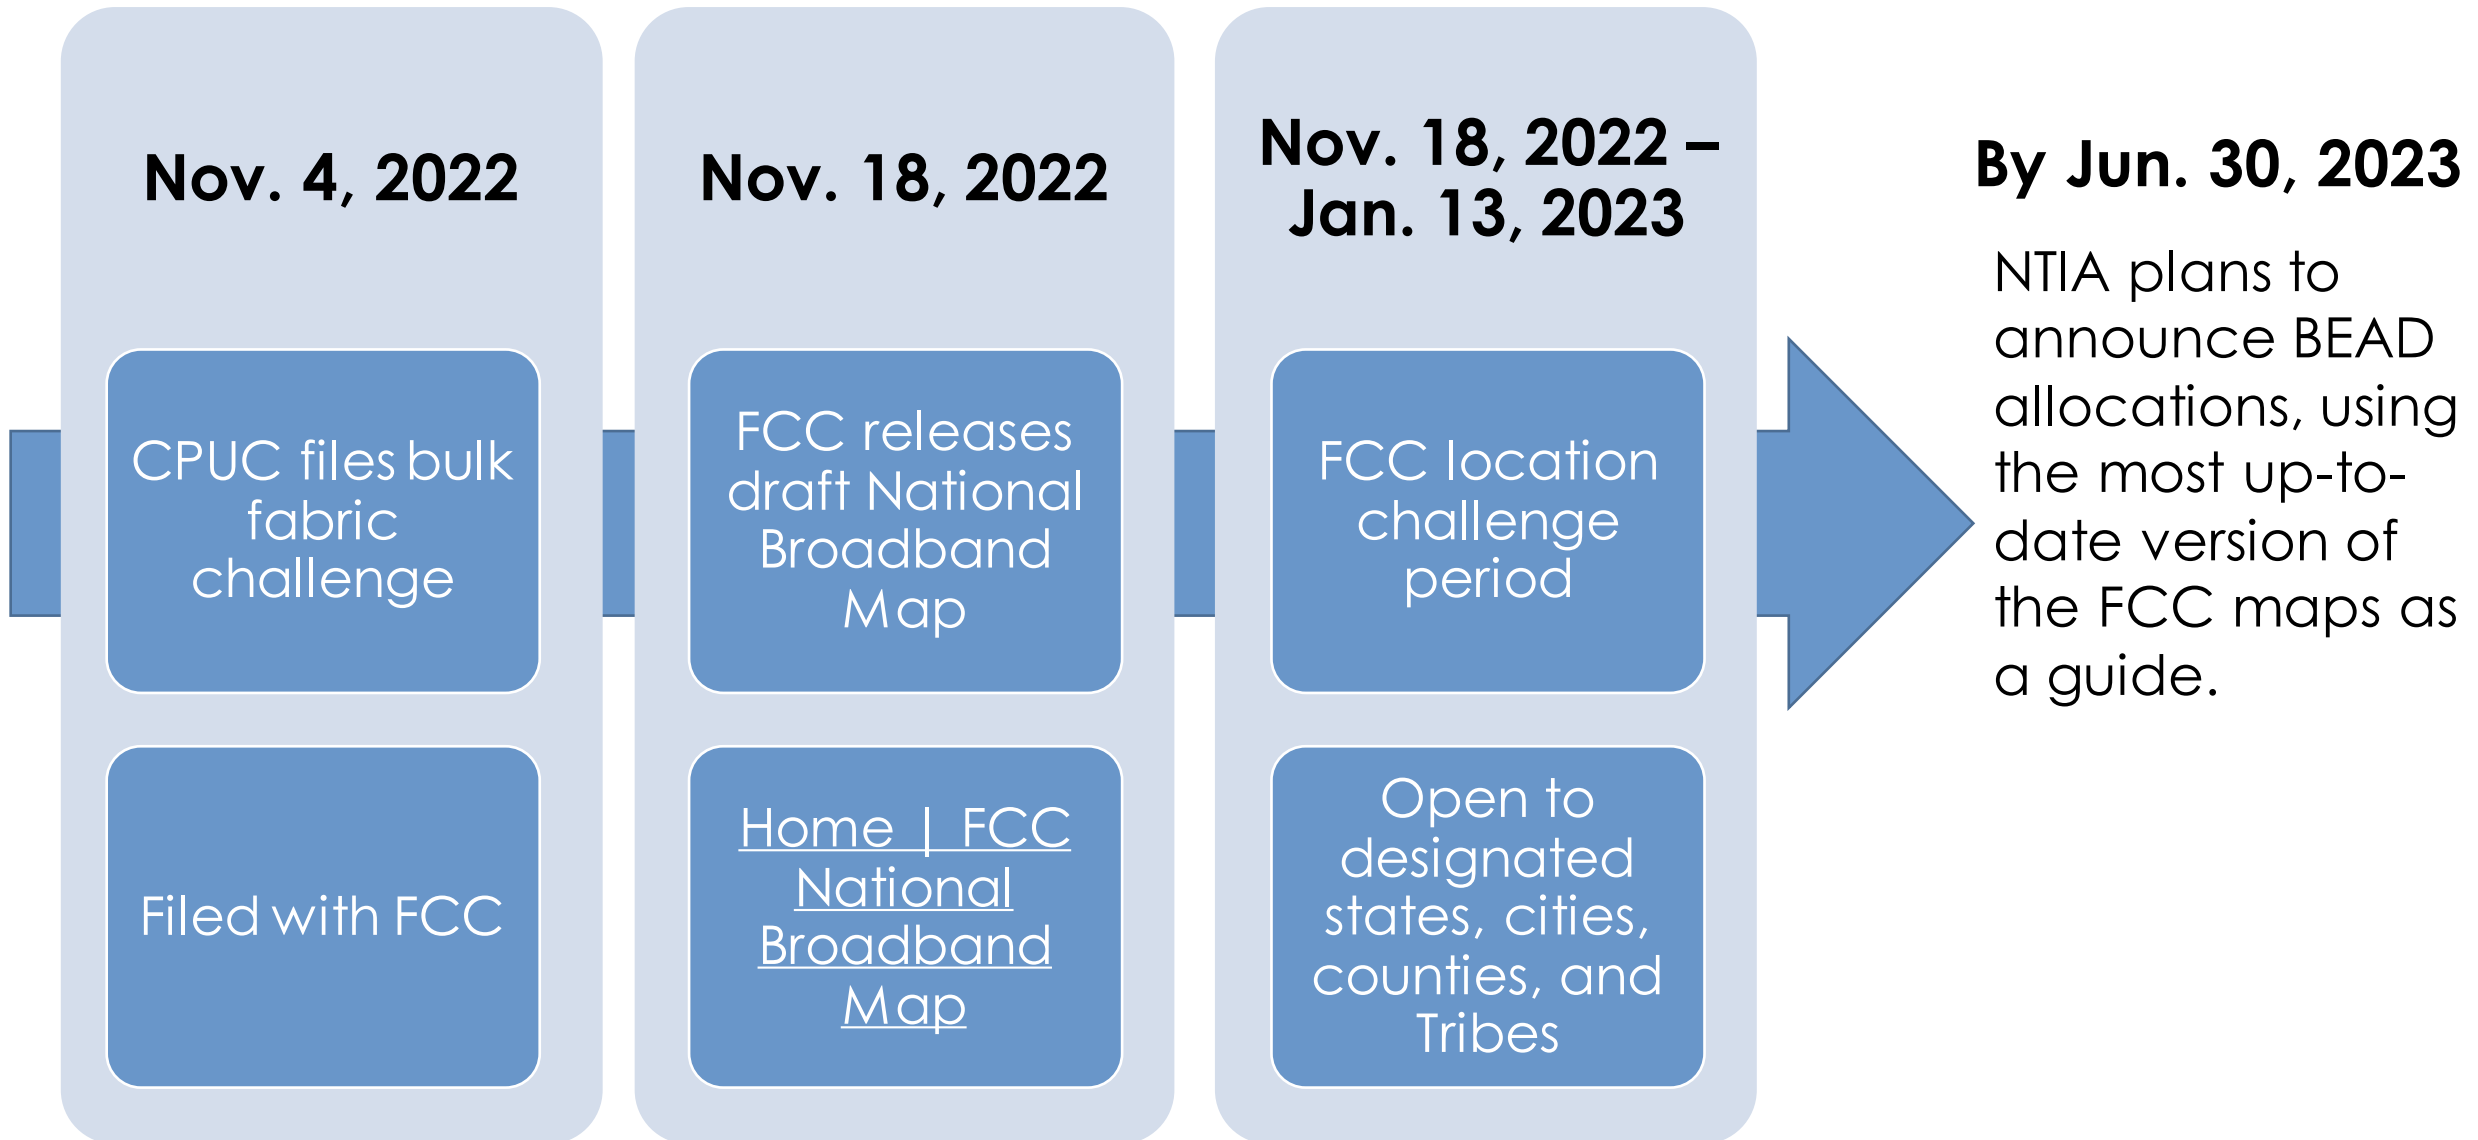

[Availability Challenge](#)

Provider	Technology	Down (Mbps)	Up (Mbps)	Chall.
▶ AT&T Inc.	Copper	10	1	
▶ California Internet	Licensed Fixed Wireless	1000	1000	
▶ Comcast Corporation	Cable	1200	35	
▶ Hughes Network Systems, LLC	GSO Satellite	25	3	

# How to Help Improve the Map

- If you think **the information about the location point** of your home or another location is wrong, you can submit a **Location Challenge**, from the map.
- You can also submit a Location Challenge if you think a location is missing from the map.
- If you think the information on the map about which ISPs offer broadband service to your home, or to another location, is wrong, **you can dispute it** by submitting an Availability Challenge from the map.
- If you think the information on **mobile coverage** is wrong, you can dispute that as well by **taking speed tests on your mobile phone with the FCC Speed Test app**.
  - The results of these tests will be aggregated to create Mobile Challenges that mobile providers must respond to improve their coverage maps.

# FCC Map and Challenge Process

# Challenge Process Overview

## What

- The reported service is not offered, or the reported speed is not available for purchase
- The internet service provider denied a request for service or demanded connection charges that exceed its standard installation charge, or
- The internet service provider failed to schedule or perform an installation within 10 business days of request.

## How

- **Individual challenges** to availability data for a single location. These will be accepted directly through the map interface after the maps launch November 18th, 2022.
- **Bulk challenges** to availability data for multiple locations. These may be filed directly into the BDC system by designated state agencies, Tribes, and local governments that file with the FCC. Bulk challenge validation methods must be approved by the FCC and must meet the format of the applicable data specification. Bulk availability challenges began after maps are released on November 18th, 2022. The current filing deadline is January 13, 2023.

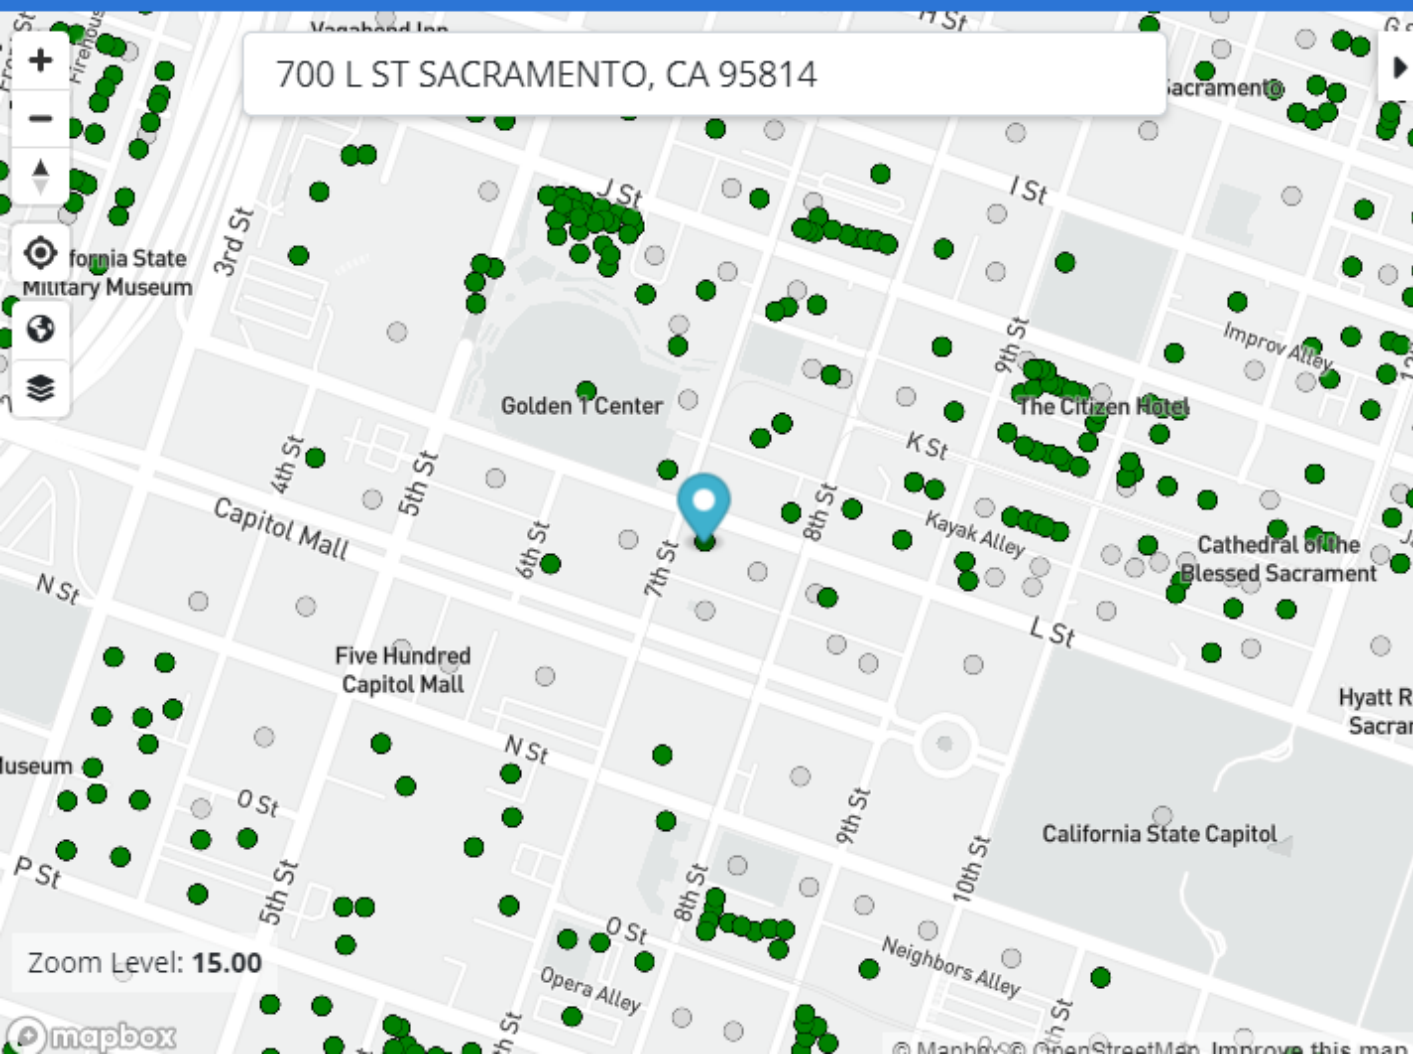

## Who

- Internet service providers, government entities, and “other,” e.g. anchor institutions, CBOs, individuals

# Individual Challenge

- **Missing Location:** A location – like a home or small business - where consumer internet service is or could be available is missing from the map.
- **Misidentified Location:** A location's broadband service is incorrectly identified (for example, a gray point is really a home or small business that does not take a commercial-grade internet service).
- **Incorrect Information:** Information such as the address or unit count for the location is incorrect.
- **Incorrect Placement on the Map:** The location's placement (its geographic coordinates) is incorrect – for example, the structure identified as the point to which internet service is delivered is incorrect.

## Selected Location

# Bulk Challenge

# Bulk Challenge Categories

- Provider failed to schedule a service installation within 10 business days of a request.
- Provider did not install the service at the agreed-upon time.
- Provider requested more than the standard installation fee to connect the location.
- Provider denied the request for service.
- Provider does not offer the technology at the location.
- Provider does not offer the speed(s) shown on the National Broadband Map for purchase at the location.
- No wireless or satellite signal is available at the location.
- New, non-standard equipment is required to connect the location.

# Bulk Fixed Availability Challenge Methodology

Knowledge  
of  
Infrastructure

accepted)

<https://help.bdc.fcc.gov/hc/en-us/articles/10390523851803-How-to-Format-Bulk-Fixed-Challenge-and-Crowdsourced-Data>

# Crowdsourced Data

# Differences between Bulk Fixed Availability Challenge Data vs. Crowdsourcing Data

- **Crowdsourcing** is a less formal and more expansive way to submit data
  - It does not require a provider response and can cover information about broadband speeds in addition to broadband availability.
  - The FCC will use crowdsourcing data as a tool for verifying provider availability data.
- Each **Challenge** is sent to the challenged Internet service provider and requires a response from the provider about its service availability at the challenged location.
  - Challenges are meant to formally dispute the availability data submitted by a provider in the Broadband Data Collection (BDC) and published on the FCC's National Broadband Map.

<https://help.bdc.fcc.gov/hc/en-us/articles/10390788241307-Differences-between-Bulk-Fixed-Availability-Challenge-Data-and-Crowdsourcing-Data>

# Bulk Crowdsourcing Categories

- Provider failed to schedule a service installation within 10 business days of a request.
- Provider did not install the service at the agreed-upon time.
- Provider requested more than the standard installation fee to connect the location.
- Provider denied the request for service.
- Provider does not offer the technology at the location.
- Provider does not offer the speed(s) shown on the National Broadband Map for purchase at the location.
- The actual speed of the service does not match its advertised speed.
- No wireless or satellite signal is available at the location.
- New, non-standard equipment is required to connect the location.

# Submitting Bulk Crowdsourced Data

- Provider failed to schedule a service installation within 10 business days of a request.
- Provider did not install the service.
- Provider requested more than one location.
- Provider denied the request for service.
- Provider does not offer the technology at the location.
- Provider does not offer the speed(s) shown on the National Broadband Map for purchase at the location.
- **The actual speed of the service does not match its advertised speed.**
- No wireless or satellite signal is available at the location.
- New, non-standard equipment is required to connect the location.

• **This reason can be submitted for crowdsourced data but not challenges.**  
• **Filers interested in sharing speed test results should use this reason code.**

<https://help.bdc.fcc.gov/hc/en-us/articles/10390133372955-Overview-of-Bulk-Fixed-Crowdsourced-Data>

# Speedtesting

# Fixed Broadband Speed Tests

- Fixed broadband speed test data are part of crowdsourced data, not challenge data, except for mobile.
- Fixed broadband speed testing comparing measured speed to subscribed speed addresses truth-in advertising and service quality more than “yes/no” service availability with one exception: served threshold.
- Mobile speed test data may be submitted as part of the FCC’s mobile availability challenge process

<https://help.bdc.fcc.gov/hc/en-us/sections/8772130447515-Mobile-Availability-Challenges>

# CPUC Milestones – FCC Map Data

## Bulk Fabric Challenge

- Filed with FCC Nov. 4
- 46,410 corrections, 2/3 of those were missing from FCC's fabric = additional locations

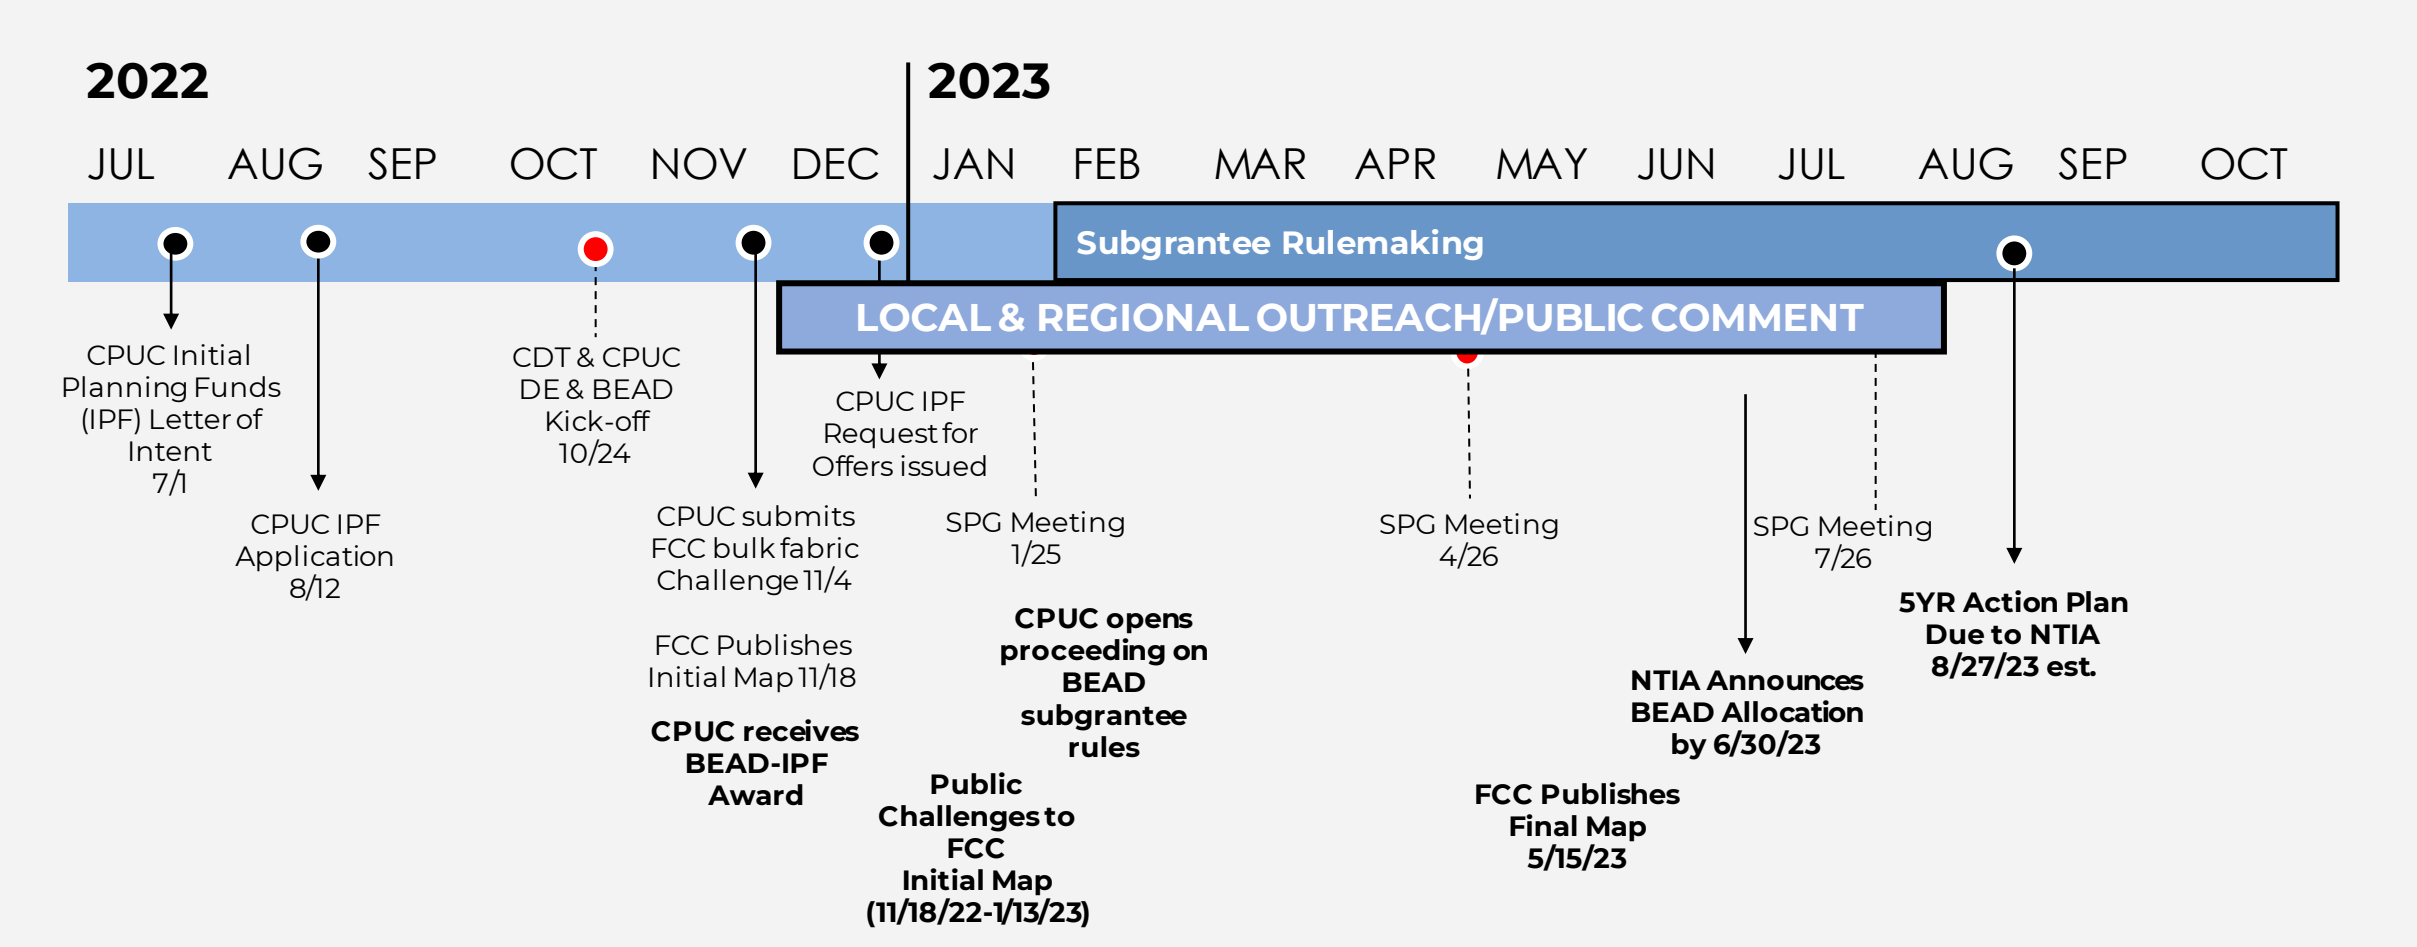

## Bulk Availability Challenge

- Due before Jan. 13, 2023
- Over 10 million locations in CA
- Over 150 providers

# BEAD Timeline

## Key Milestones

# Call to Action

- **Help spread the word about validating the National Broadband Map**
- Consumers can easily dispute, or challenge, inaccurate information on the map.
- Your organization can help get the word out by using the FCC's outreach materials.
- You can download and customize them to meet your outreach needs:
- <https://www.fcc.gov/national-broadband-map-outreach-toolkit>

NEED HIGH-SPEED INTERNET?

# CHECK THE NATIONAL BROADBAND MAP!

The FCC has a new map showing where high-speed service is – and is not – available across the country.

High-speed, high-quality internet service is essential for participation in modern life.

The map shows where internet service providers report service and includes input from consumers.

**This is where YOU come in!**

## Help Improve the Map

Search for your home or small business to see if your location and service availability are accurate on the map. If you think the map is incorrect or incomplete, you can [submit a challenge](#) to the FCC to correct it.

**Location Challenges can**

- Add a missing location.
- Correct the address or other details of your location.
- Correct the geographic placement of your home or small business.

**Mobile Availability Challenges**

Will be created using the FCC Speed Test App. To participate, download the App. The data that you share will be combined with other speed tests conducted in your area and may be used to create a challenge.

**Service Availability Challenges can**

- Correct services not offered or reported speeds that are not available for purchase.
- Report that a provider denied a request for service or demanded connection charges that exceed its standard installation charge.
- Report that a provider failed to schedule an installation within 10 business days of a request for service or failed to perform the installation.

**Scan for more information**

**Accurate Maps = Improved Internet Access**

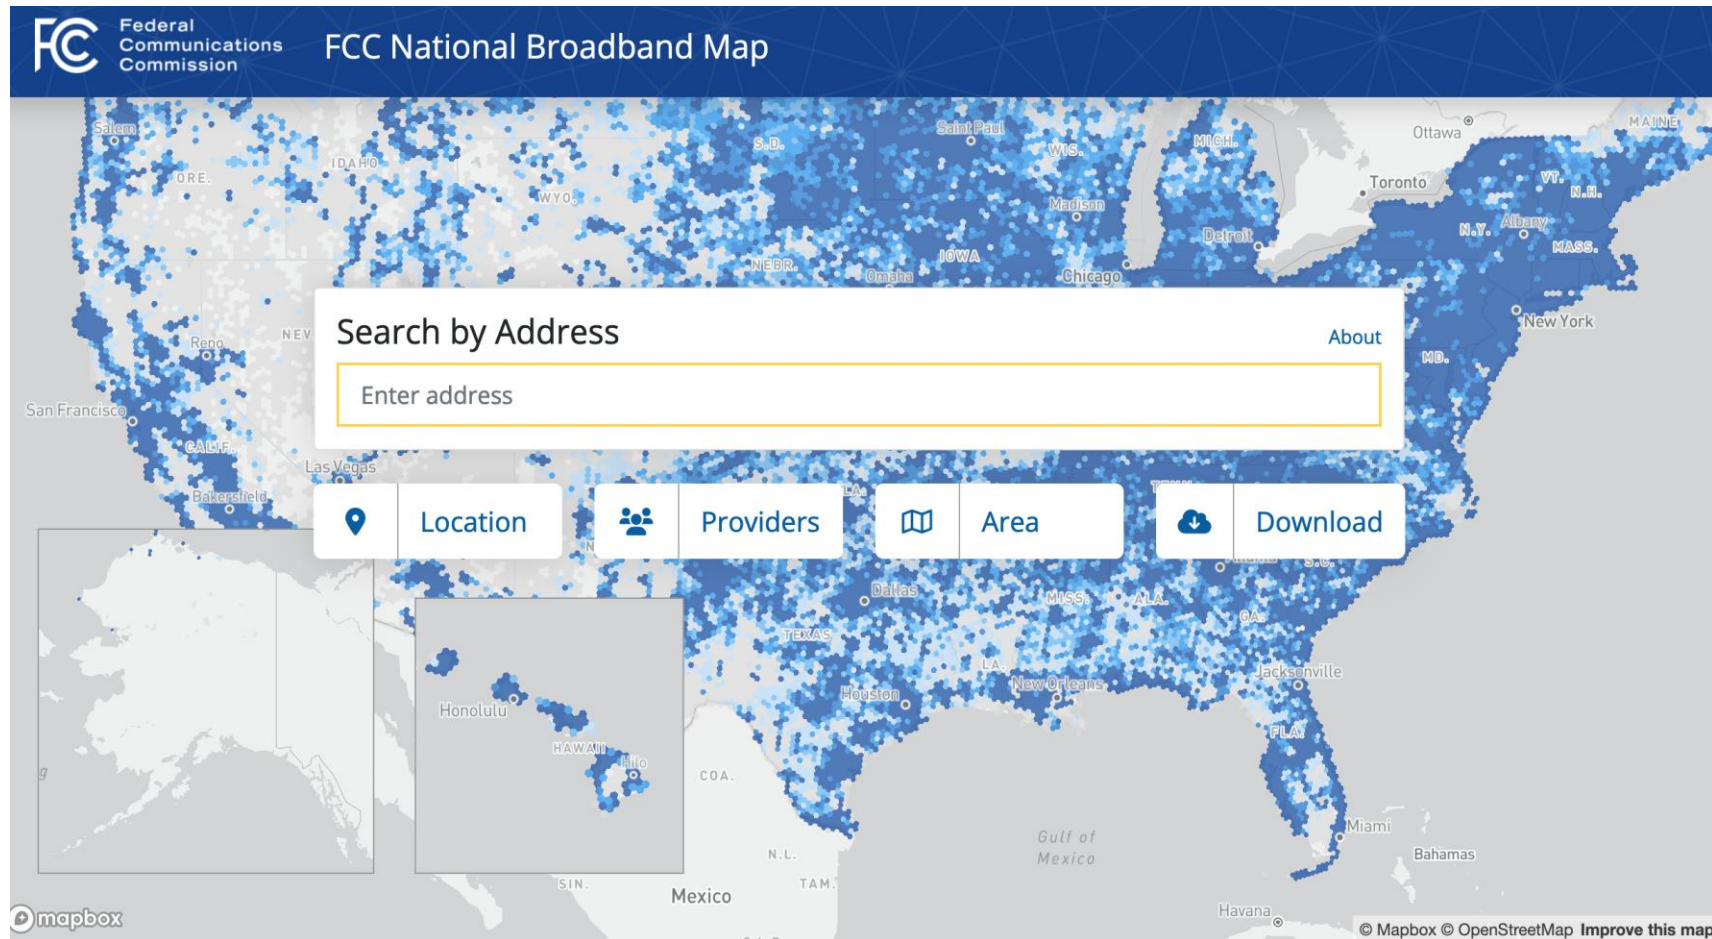

An accurate map will help identify the communities most in need of funding for high-speed internet projects.
